

techhosting.com Announces New Web Hosting Company: techhosting

techhosting has support for latest technologies, 24/7 service, and passionate team of nerds

LOS ANGELES, CA — January 2, 2006 — Today, in the ever-changing and highly-competitive world of web hosting, techhosting.com would like to take the opportunity to introduce you to the coolest new kid on the block: techhosting.

techhosting is a new web hosting company created by a bunch of old nerds for the latest group of new nerds. Members of the techhosting team have been working with computers and the internet before they even learned how to walk. Some of them are still working on that, among other thing (like maintaining a social life). They are fans of clean code, new languages, and double shots of caffeine. With the spread of web 2.0, they set out to find hosting for their own projects but encountered only disappointments and setbacks, quite similar to their attempts at dating. Fed-up with web hosting providers who were behind the times, they got together and created a web hosting company comprised of the newest hardware and the best support for the latest technologies, such as Ruby on Rails and PHP.

After extensive planning, research, and cans of energy drinks, techhosting was formed to bring up-to-date web hosting for the web 2.0 generation. The company carries the best servers, runs on cPanel—the most user-friendly and flexible web hosting interface available—and offers 24/7 customer service and technical support for just \$3.95/month. Additionally, each techhosting package comes with 50 gigabytes (50,000 MB) of hosting space and 1,000 gigabytes of bandwidth, allowing for more than enough resources to support the next big thing.

About techhosting

techhosting (<http://www.techhosting.com>) is a web hosting company focused on supporting the new generation of internet users. Their web hosting package, known as the techhosting package, offers everything needed to create and maintain a dynamic web site for only \$3.95/month. The people at techhosting, proud of their nerd status, are constantly monitoring the internet for changes in technology and ways to ensure that the techhosting package stays up-to-date. The company is privately held and headquartered in Los Angeles, California.
